## Summary

---

I graduated Ranken Technical College in 2015 with a degree in Internet and Web-based Technology. While at Ranken I had an internship at a government consulting company called Aegis Strategies. The day after I graduated, I started at Aegis as their full-time Technical Support Engineer for the entire company. We're growing exponentially. I love my job! After I leave Aegis for the day, I head to my co-working space in Downtown St. Louis where I focus on my personal ventures. I build websites for small business and students. I am the founder of Cars and Coffee St. Louis, which is a string of early morning car events ranging anywhere from 60-800 cars per event. I sit on the board for the European Auto Show; the biggest European automotive event in the metro area. So far, we've raised over \$350,000 for St. Louis Arc. I create content, mostly videos/commercials for realtors and other business owners. I repair personal computers, laptops and small networks for individuals and businesses. Finally, I professionally detail cars. As you can probably guess, I'm a diehard automotive enthusiast on all levels.

## Skills

---

Although I learned a lot of back-end programming languages while studying at Ranken, I fell in love with front end development from the start. It's what motivated me to attend Ranken right after high school, in the first place.

### Languages

- Automotive Detailing

# Education

---

August 2013 – May 2015 Internet and Web-Based Technology, Ranken Technical College

- Selected by my instructor to speak and work with students touring Ranken with intent on influencing them on how great the IT field is – especially in St. Louis.
- I've influenced many of my friends to study computer programming and web design as a profession. I think it's extremely interesting.
